

Insurance Distribution Platform

Phase 3 – Business Processes & Customer Journeys (v0.1)

Purpose

This document decomposes the major business capabilities into end-to-end business processes and customer journeys. It is intentionally business-focused and avoids technical implementation details. The objective is to define how the bank expects the platform to operate from lead creation to policy servicing.

JRN-001 — RM Assisted New Policy Purchase

Business Goal

Deliver a complete, auditable and customer-centric process for **RM Assisted New Policy Purchase** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.
- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-002 — Existing Customer Policy Purchase

Business Goal

Deliver a complete, auditable and customer-centric process for **Existing Customer Policy Purchase** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-003 — Lead Creation & Assignment

Business Goal

Deliver a complete, auditable and customer-centric process for **Lead Creation & Assignment** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-004 — Consent Capture

Business Goal

Deliver a complete, auditable and customer-centric process for **Consent Capture** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-005 — Suitability Assessment

Business Goal

Deliver a complete, auditable and customer-centric process for **Suitability Assessment** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-006 — Product Discovery & Recommendation

Business Goal

Deliver a complete, auditable and customer-centric process for **Product Discovery & Recommendation** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-007 — Quote Generation (1SB / Future Direct)

Business Goal

Deliver a complete, auditable and customer-centric process for **Quote Generation (1SB / Future Direct)** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-008 — Quote Comparison & Selection

Business Goal

Deliver a complete, auditable and customer-centric process for **Quote Comparison & Selection** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-009 — Proposal Submission

Business Goal

Deliver a complete, auditable and customer-centric process for **Proposal Submission** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-010 — Underwriting & Medical Tracking

Business Goal

Deliver a complete, auditable and customer-centric process for **Underwriting & Medical Tracking** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-011 — Payment & Policy Issuance

Business Goal

Deliver a complete, auditable and customer-centric process for **Payment & Policy Issuance** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

JRN-012 — Renewal & Customer Servicing

Business Goal

Deliver a complete, auditable and customer-centric process for **Renewal & Customer Servicing** while maintaining regulatory compliance and operational efficiency.

Attribute	Definition
Primary Actor	Relationship Manager (RM), Customer, Operations
Supporting Actors	Insurance Partner, Payment Gateway, Underwriting Team
Trigger	Customer expresses insurance need or RM initiates sales journey
Entry Criteria	Authenticated RM, valid customer profile, required permissions
Exit Criteria	Journey completed, paused, abandoned or handed over to next stage
Business Outcome	Journey state updated with complete audit trail
KPIs	TAT, Conversion %, Drop-off %, SLA, Customer Satisfaction

Standard Business Flow

- 1. RM identifies customer need.
- 2. Lead is created or resumed.
- 3. Customer consent is captured and validated.
- 4. Suitability assessment is completed.
- 5. Eligible products are identified.
- 6. Quote or journey is initiated through the configured integration capability.
- 7. Customer reviews available options.
- 8. Proposal is prepared and submitted.
- 9. Underwriting and medical activities are tracked.
- 10. Payment is completed.
- 11. Policy is issued.
- 12. Journey status is updated and reported.

Alternate Flows

- Customer already exists.
- Customer pauses and resumes later.
- RM changes recommended product.
- Multiple eligible products available.
- Customer decides not to continue.

Exception Scenarios

- Consent expired.
- Customer fails eligibility.
- Quote service unavailable.

- Payment failure.
- Underwriting rejection.
- Policy issuance timeout.

Business Rules

- Every customer action must be auditable.
- Suitability recommendations shall be recorded.
- Journey status must be traceable.
- Customer data shall be handled according to bank security policies.
- Configurable rules should be preferred over hard-coded behaviour.

Cross-Capability Traceability

Business Capability	Linked Journey
Lead Management	JRN-003
Consent Management	JRN-004
Suitability	JRN-005
Product Catalogue	JRN-006
Quote	JRN-007 & JRN-008
Proposal	JRN-009
Underwriting	JRN-010
Payment	JRN-011
Policy Management	JRN-011 & JRN-012

Deliverable for Phase 4

Phase 4 will expand these business journeys into detailed business rules, information models, role-responsibility matrices (RACI), state models, decision tables, and requirement traceability before solution architecture begins.
