

Insurance Distribution Platform

Phase 1 – Business Discovery & Capability Map

(v0.1)

Purpose

This document establishes the business capability map for the new bank-owned insurance distribution platform. It intentionally avoids solution architecture and focuses on what business capabilities the platform must provide. It will become the foundation for subsequent BRD, PRD, architecture, API, data model and testing documents.

Platform Vision

Build an independent, bank-owned insurance distribution platform that manages the complete insurance sales journey from lead creation through policy issuance, while initially integrating with 1SilverBullet and evolving towards direct insurer integrations.

Core Business Capabilities

Domain	Capability
Customer	Customer Management
Sales	RM Workspace
Sales	Lead Management
Compliance	Consent Management
Advisory	Suitability & Recommendation Engine
Products	Product Catalogue & Product Matrix
Sales	Quote Management
Sales	Quote Comparison
Sales	Proposal Management
Operations	Underwriting Tracking
Payments	Payment Management
Policies	Policy Issuance & Policy Management
Service	Renewals & Servicing
Communication	Notifications & Communication
Analytics	Reporting & Dashboards
Admin	Administration & Configuration
Integration	Integration Hub (1SB now, Direct Insurers later)
Security	Identity, Access, Audit & Compliance

Business Principles

- Business capabilities drive architecture.

- The platform owns customer journey, lead, consent, suitability and reporting.
- Integration providers are replaceable implementation details.
- Canonical business model remains independent of insurer payloads.
- Every capability must be traceable to business goals and measurable KPIs.

Phase 1 Deliverables

1. Business capability map (this document).
2. Stakeholder catalogue.
3. Business glossary.
4. Business process inventory.
5. High-level customer journeys.
6. Business requirement catalogue.
7. Capability ownership matrix.
8. Business rules inventory.

Next Step

Expand each business capability into a comprehensive Business Requirement Catalogue before any solution architecture or microservice design begins.
